Multi-Page Travel Booking Website -

Project Overview:

This Travel Booking Website allows users to explore popular travel destinations, view hotel listings, and book accommodations using an interactive booking form. The site should be visually appealing, mobile-friendly, and provide a smooth user experience.

Project Requirements:

Technologies to Use:

✅ HTML5 - Page structure

✅ CSS3 - Styling (with Bootstrap 5)

✅ Bootstrap 5 - Responsive design and UI components

✅ JavaScript - Form validation, search/filtering, and interactive features

✅ FontAwesome - Icons for better UI

✅ Google Maps API (Optional) - To show locations

Required Pages & Features

1. Home Page (Popular Destinations)

File Name: index.html

Purpose: Landing page displaying top destinations with an attractive UI

Features:

✅ Hero Section - A large, beautiful image with a welcome message and a 'Book Now' button.

✅ Search Bar - Allow users to search for a destination.

✅ Popular Destinations Section - Display 6+ destinations using Bootstrap 5 cards (each with an image, name, and short description).

✅ Carousel/Slider - To showcase featured travel locations.

✅ Testimonials - A slider with customer reviews.

✅ Footer - Social media links & contact details.

2.Destination Details Page

File Name: destination.html

Purpose: Shows detailed information about a selected travel destination.

Features:

✅ Image Gallery - A grid-based gallery showcasing different images of the destination.

✅ Description Section - Detailed text about the place.

✅ Things to Do - A list of attractions & activities.

✅ Weather Widget - (Optional) Show current weather using a free API.

✅ Nearby Hotels Button - Redirects to the hotels.html page.

3. Hotel Listings Page

File Name: hotels.html
Purpose: Displays a list of available hotels at the selected destination.

Features:
✅ Filter Section - Users can filter by price range, star rating, or amenities (WiFi, Pool, etc.).
✅ Hotel Cards - Bootstrap 5 cards displaying hotel images, names, ratings, and prices.
✅ Sort Option - Sort hotels by price or rating.
✅ View Details Button - Redirects to a hotel details page.

4. Booking Form Page

File Name: booking.html
Purpose: Allows users to enter booking details.

Features:
✅ Form Fields:
  - Name
  - Email
  - Phone Number
  - Destination
  - Check-in & Check-out Date
  - Number of Guests
  - Room Type (Dropdown)
✅ Form Validation (JavaScript) - Ensure all fields are correctly filled.
✅ Summary Section - Shows selected hotel details before submitting.
✅ Submit Button - Displays a success message on submission.

5. Contact Us Page

File Name: contact.html
Purpose: Allows users to send inquiries or feedback.

Features:
✅ Contact Form (Name, Email, Subject, Message)
✅ Google Map Integration (Optional) - Show office location
✅ Social Media Links & Contact Details

⚡ Additional Features (Optional but Recommended)

Dark Mode Toggle - Allow users to switch between light & dark themes.
Loading Animation - Add CSS animations for better UI.
Sticky Navigation Bar - Keep navigation fixed on scroll.
Back to Top Button - Smooth scrolling effect.
Live Chat Widget - Implement a basic chat UI (Frontend only).
